

STEPHANIE ONWUAGBAIZU

+23470 8904 9675 - stephanieonwuagbaizu@gmail.com - www.linkedin.com/in/stephanieonwuagbaizu - <https://github.com/steph2502>

Professional Summary: Stephanie is a Software Engineer with a builder's mindset. She designs and ships scalable applications, APIs, and intelligent systems across web, automation, and optimization. Driven by hard problems, she brings technical depth and product thinking from architecture to deployment, communicates clearly across teams, and thrives where clean code meets real-world impact.

EDUCATION

Covenant University, Otta, Ogun State, Nigeria

Sep 2022 — Sep 2026

Bachelor of Science, Computer Science - Undergraduate Degree (4.89/5.00)

EXPERIENCE

Pacepard (Software Engineer)

Sep 2025 — Present

Remote

- Built and scaled 4 core application modules (hackathon, project, resource, and task) in TypeScript, delivering robust API functionality within a team of 4 engineers.
- Drove code quality through structured GitHub workflows, pull requests, code reviews, and version control, maintaining consistency across a collaborative codebase.
- Introduced architectural improvements and best practices, leading to cleaner, more maintainable code across the team.

Google Developer Groups (Community Manager)

Oct 2025 — Present

Covenant University

- Organized and executed 5+ flagship community events including DevFest, TechFest, Demo Day, workshops, and tech meetups growing event participation and community visibility across campus.
- Strengthened community engagement and collaboration as Community Manager, fostering a more inclusive developer ecosystem and driving measurable growth in active participation within 5 months.

Huawei Technologies (Radio Frequency Engineer Intern)

March 2025 — Aug 2025

Lagos Island, Nigeria.

- Coordinated remote support and issue resolution across 100+ live telecom sites, ensuring network performance consistently met SLA targets.
- Led cross-functional collaboration with field engineers and client teams across 3 major carriers (MTN, Airtel, Glo) to troubleshoot and resolve network issues within agreed timelines.
- Managed configuration and integration of network elements across sites, documenting procedures and escalating critical issues to minimize downtime.
- Produced regular operational reports including MoPs and incident reports, improving process visibility and compliance across the team.

Norak Technologies (Software Development Intern)

Dec 2024 — Dec 2024

Anthony, Lagos, Nigeria

- Built and documented REST APIs with Node.js and Express.js powering core application features, enabling efficient data flow between frontend and backend services.
- Designed and integrated dynamic web pages with backend APIs, delivering functional, end-to-end user-facing features.
- Modeled and managed application data using Mongoose and MongoDB, ensuring efficient querying and structured data storage.

Innovate Her Ideathon (Project Team Lead)

May 2023 — May 2023

Lagos, Nigeria.

- Led a cross-functional team to conceptualize, design, and deliver Agro Aid, an agritech solution from idea to working prototype in under 2 weeks, placing 3rd overall.
- Owned project execution end-to-end: delegating tasks, managing timelines, and driving the team to hit every milestone under tight deadline pressure.
- Designed the product's UI/UX in Figma and Canva, crafting interfaces that balanced visual appeal with usability.

TECHNICAL SKILLS

Language: Python, JavaScript/TypeScript, SQL, HTML/CSS

Developer Tools: Git/GitHub, Postman, Docker, PostgreSQL, MongoDB

Frameworks/Technologies: Django, FastAPI, Flask, Node.js, Express.js

PROJECTS

Oohlala Fragrances Telegram Bot | [Live](#) | [GitHub](#) *Node.js, Express.js, Telegraf.js, MongoDB, Korapay, Axios, Railway*

- Developed and deployed a Telegram-based e-commerce platform serving 50+ customers, allowing users to browse products, place orders, and complete payments without leaving the app.
- Engineered scalable backend APIs and payment workflows with MongoDB and Korapay, automating order management and transaction processing.

Timetable Optimization System | [Live](#) | [GitHub](#) *FastAPI, React, Python (ACO, PSO)*

- Developed an intelligent university timetabling system using a hyper-heuristic framework that dynamically selects between Ant Colony Optimization (ACO) and Particle Swarm Optimization (PSO) to generate high-quality, conflict-free schedules.
- Built and deployed the complete application stack, implementing optimization algorithms, a FastAPI backend, and a React-based interface for timetable generation and management.

ADDITIONAL INFORMATION

Certifications: HP LIFE Data Science and Analytics, Huawei Certified ICT Associate (HCIA) Project Management, OBTranslate Prompt Engineering Certificate

Associations: Google Student Developer Community Manager, Microsoft Learn Student Ambassadors Community Member, Inventors Community lead, African Technology Forum Campus lead

Language: Fluent in English and Igbo (Native)

Hobbies: Reading technology and industry insights on Substack, hosting podcasts, community building, music, and film
